

Digital Content Warehouse

Creating Sustainable Equity In K-12 Education Through Digital Resources

CUSTOMIZABLE AND FREE DIGITAL CONTENT

- Allows teachers to fill in gaps in their courses with quality digital content to supplement face-to-face lessons blending instruction in classrooms increasing student engagement.
- All content is fully customizable allowing educators and their students to cultivate agency and ownership over their own learning.
- Content belongs to you! Once you have the course in your possession, your district has complete full access to customizing any or all of the content to align to district standards, school adoptions, and/or individual classroom needs.
- Since the content belongs to the educators, they have the ability to scale and offer access to students without the burden of paying for individual course or student licenses.

ENSURING QUALITY

- Our content is offered to be used as a supplement to our professional development program for educators to apply their learning using digital content resources. We train educators in how to create high quality digital curriculum, according to national standards. Educators apply their expertise and understanding of their students' interests and needs to develop their added custom content that is uniquely engaging, increasing student engagement.

REDUCING COSTS

- Because districts and charter networks can build upon the content created by their peer organizations and supplement content leveraging their existing staff, they remove the need for paying costly licensing fees. Since teachers own the content, they can build upon the content year after year and make the courses uniquely theirs and tailored to their students' needs.

Digital Course Templates

ENGLISH
